

Project CODE

What's Project CODEt?

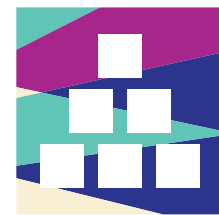

Project CODEt is an organization founded by high school students in the Northern Virginia region to expose students to Computer Science through workshops, programs, and other engaging activities. By furthering their interest, we hope to encourage students to continue their education in in Computer Science throughout their academic careers.

Enrich

Encourage

Engineer

Enrich: The first step is immersing the students in an aspect of Computer Science. Through our workshops, students are able to pick up on small amounts of information and thoroughly grasp the topic we've chosen.

Encourage: After each student masters the information, our team members become "guiding instructors," allowing students to independently solve challenges while providing a collaborative working environment.

Engineer: After practicing the concepts learned, students conduct their own projects including apps, programs, or virtual stories. During this time, students will learn the applications of Computer Science, as they combine their creativity with Computer Science skills. This will encourage the students to build a deep connection between imagination and technology.
